GRAPHING ABSOLUTE VALUES

It's time to do more graphing — of course, this time there will be absolute values in the formula.

Solution: Pick some *x*-values, calculate *y*-values, and plot the points.

 $x = -2 \Rightarrow y = |-2| = 2 \Rightarrow (-2, 2)$ $x = -1 \Rightarrow y = |-1| = 1 \Rightarrow (-1, 1)$ $x = 0 \Rightarrow y = |0| = 0 \Rightarrow (0, 0)$ $x = 1 \Rightarrow y = |1| = 1 \Rightarrow (1, 1)$ $x = 2 \Rightarrow y = |2| = 2 \Rightarrow (2, 2)$

We've got five points, enough to make a decent picture:

Convince yourself that our graph contains the point (165, 165) and (-499, 499).

Graphing Absolute Values

EXAMPLE 2: Graph: y = |x-3|+2

Solution: Don't panic! Let's just do what we did in the first example: Pick *x*-values off the top of our head, calculate the associated *y*-values, plot the points (x, y), and see what we get.

Setting x to 0 gives y = |0-3|+2 = |-3|+2 = 3+2 = 5. We now have our first point on the graph: (0, 5).

Now set *x* to 7: y = |7-3|+2 = |4|+2 = 4+2 = 6. Our new point on the graph is <u>(7, 6)</u>.

One more $- \sec x$ to -1: y = |-1-3|+2 = |-4|+2 = 4+2 = 6. Our third point is (-1, 6).

We'll now construct an *x-y* table using the three points we've just calculated and some additional points; it's your job to verify the rest of the points.

Graphing Absolute Values

Items of Note:

Later in your course, you will be asked what *x*-values are allowed in this formula. It may not be obvious, but *x* can take on <u>any</u> value; that is, *x* can be any real number.

As for *y*-values, the graph might show that *y* can't be any smaller than 2. That is, *y* has to be <u>at least</u> 2; we could even write $y \ge 2$.

The graph is certainly not a line; it's in the shape of a "V." It is sharp at its bottom point (3, 2), not smooth and curvy like the graph of the parabola $y = x^2$ that you may have seen before.

Homework

- 1. Graph: y = |x| 2. Graph: y = |x|+3
- 3. Graph: y = |x| 4 4. Graph: y = |x+2|
- 5. Graph: y = |x-5| 6. Graph: y = |x+3|-4

The absolute value of a positive number is itself. The absolute value of 0 is 0. The absolute value of a negative number is its opposite.
